## PDF Search Engine Offered by Darnell

Corona, California, July 2, 2002 – Darnell.Com has developed a significant extension to its Smart Interactive Multimedia Publishing™ (SIMP™) technology. Darnell can now produce a CD with multiple PDF files and enable users to either browse or search the contents.

"This is an important development," stated Jeff Shepard, Darnell's President. "The PDF format is as ubiquitous as the CD-ROM drive. Darnell, and probably your company too, use PDF files to deliver information. With our new PDF Search engine, we have significantly increased the utility of the common PDF file."

SIMP™ production techniques now include the ability to take numerous PDF files (from one to several thousand, depending on the size of the files) and pull all of the text based content and use it to populate a database. It is then a straight forward process to create a search engine that enables both simple and complex searches, including parametric searches. The search results not only identify the specific PDF file(s) containing the data, the results identify the specific page(s) within the PDF document and provide a link enabling immediate access to the desired information.

The software production tools used to implemented this sophisticated PDF search capability are highly automated. As a result, Darnell can efficiently and quickly create CD-ROMs with searchable PDF files.

In addition to PDF files, Darnell's SIMP™ can deliver a variety of content including: one or more searchable databases, encrypted and/or password protected information, multiple audio tracks, video presentations, animations, active hyperlinks, automated slide presentations, and more.

And SIMPs™ that include PDF Search engine capability are easy to use, require no installation, and play as easy as a music CD. No installation makes SIMP™ friendly to users' computers and to corporate networks.

Darnell.Com is a global publishing company with offices in Corona, California and Denzlingen, Germany. Three patents are currently pending on Darnell's unique SIMP™ technology. The company's customer base includes over 400 companies in 26 countries. In addition to its proprietary Smart Interactive Multimedia Publishing™ technology, Darnell is involved in several related publishing/consulting activities.
